Polarization-Maintaining Raman Optical Fiber

P/N: 27313

Overview

OFS Raman Fiber is specifically designed for applications where a high Raman gain efficiency is required. The PM type is designed with a high index core and a small effective area. It is constructed using B203 doped stress rods for high birefringence.

With appropriate choice of pump wavelength, the standard Raman fiber can provide gain at any wavelength from 1200 to 1700 nm. Additionally, it offers bending performance, good splicing properties and low attenuation at the water peak.

Typical Applications

Discrete Broadband
Raman Amplifiers
Raman Lasers
